
A
Endpoint-focused evaluation
All evidence is revealed before scoring
history
+
all images
predicts Dx
Score final diagnosis only
Process remains unmeasured
· Lucky guess · Premature closure
· Over-testing · Poor updating
B
DDx-TRACE
The model must acquire evidence sequentially
limited history
requests evidence
image exam
repeat until stop
Workup quality (Evaluate after each turn)
Evidence recall checklist
Image order
trajectory efficiency
Update probabilistic DDx
Dx A 75%
Dx B 20%
Dx C 4%
Dx D 1%
Score endpoint + trajectory quality
